1.0 FEATURES

- Ships with the Ethernet Smoot Stepper Motion Controller installed.
- Built-in PWM-Based Speed Control and Two Built-in Electromechanical Relays with NO and NC positions for spindle control.
- The system monitors:
 - E-Stop
 - Safety Charge Pump.
- Electromechanical Relay with NO and NC positions for general purpose (Port_2 16 or 17, jumper-selectable).
- Microcontroller based SCHP.
- Optoisolated inputs working at 5-24VDC.
- Uses a single +10 to +30VDC to power the system. It generates the isolated voltage for the spindle control circuit and +5vdc for circuits using TTL logic.
- Status LEDs on all input and Output connections.
- DIN Rail mountable.
- Open Collector Outputs pins 1, 14, 16, 17.
- Screw-On connections for all terminals.
- Status LEDs for enable.
- Available installers and configuration files that configure all the functions of the board.

3.0 BOARD DESCRIPTION

4.0 POWER TERMINALS AND CONFIGURATION

4.1 Power terminal

Regulated +10VDC or +30VDC is required to power this board.

WARNING

Check the polarity and voltage of the external power source and connect the 10VDC to 30VDC and GND. Overvoltage or reverse-polarity power applied to these terminals can cause damage to the board, and/or the power source

4.2 Source Output 5VDC

4.3 Source Output 10-30VDC

10-30VDC can be sourced to sensors or other cards requiring it.

6.0 E-STOP TERMINAL (24V)

Connect an E-STOP push button as is shown in the below images.

Pin 10 port 1 is used for E-Stop. Since this board controls the enable line, and the enable line is the one responsible for notifying the controller of the e-stop condition, the user does not have a direct access to the pin itself, just to the e-stop terminal on the board. The E-Stop terminal is tied to the enable line and will trigger the e-stop. A fault or E-Stop triggers a low for 5 seconds to notify the controller of the fault condition, then resets to high again

7.0 CONFIGURATION JUMPERS
